

Case Study On Python Basics

1. Bank Account Manager

- a. Simulate a bank account with deposit, withdrawal, and balance enquiry operations
- b. Use variables and data types to store account information
- c. Implement conditional statements to check for sufficient balance before withdrawal
- d. Use functions to perform deposit, withdrawal, and balance inquiry operations.

2. Weather Data Analyzer

- a. Analyze weather data (temperature, humidity, etc.) for a given region
- b. Use variables and data types to store weather data
- c. Implement conditional statements to determine weather conditions (sunny, rainy, etc.)
- d. Use functions to calculate average temperature and humidity, and print results

Please note the following:

Display the output for every action

Create a repository in GitHub account as "Public"

Upload the notebook file(.ipynb) to the repository

Please make sure that you are uploading the notebook file including the outputs as well

Share the link of this notebook from GitHub in the online text editor provided in Paatshala
